

# **CODING AND BILLING STRATEGIES FOR SUCCESS 101**

DARYN EIKNER

ANN FINN

December 3, 2012

# Objectives - 101

- After attending this workshop, participants will:
  - ▣ Understand the importance of complete documentation and the impact it has on billing the visit
  - ▣ Be able to determine appropriate coding for family planning visits
  - ▣ Have increased knowledge of strategies to train clinicians on proper coding

# Best Practices: Why does it matter?

3

- Good coding & documentation will:
  - ▣ Lead to appropriate revenue regardless of payer and changes
  - ▣ Allow for effective advocacy and reimbursement increases which reflect services provided
    - Providers often take care of multiple health issues during visit
    - Multiple visit protocols have been streamlined to one day
  - ▣ Support billing and audit questions

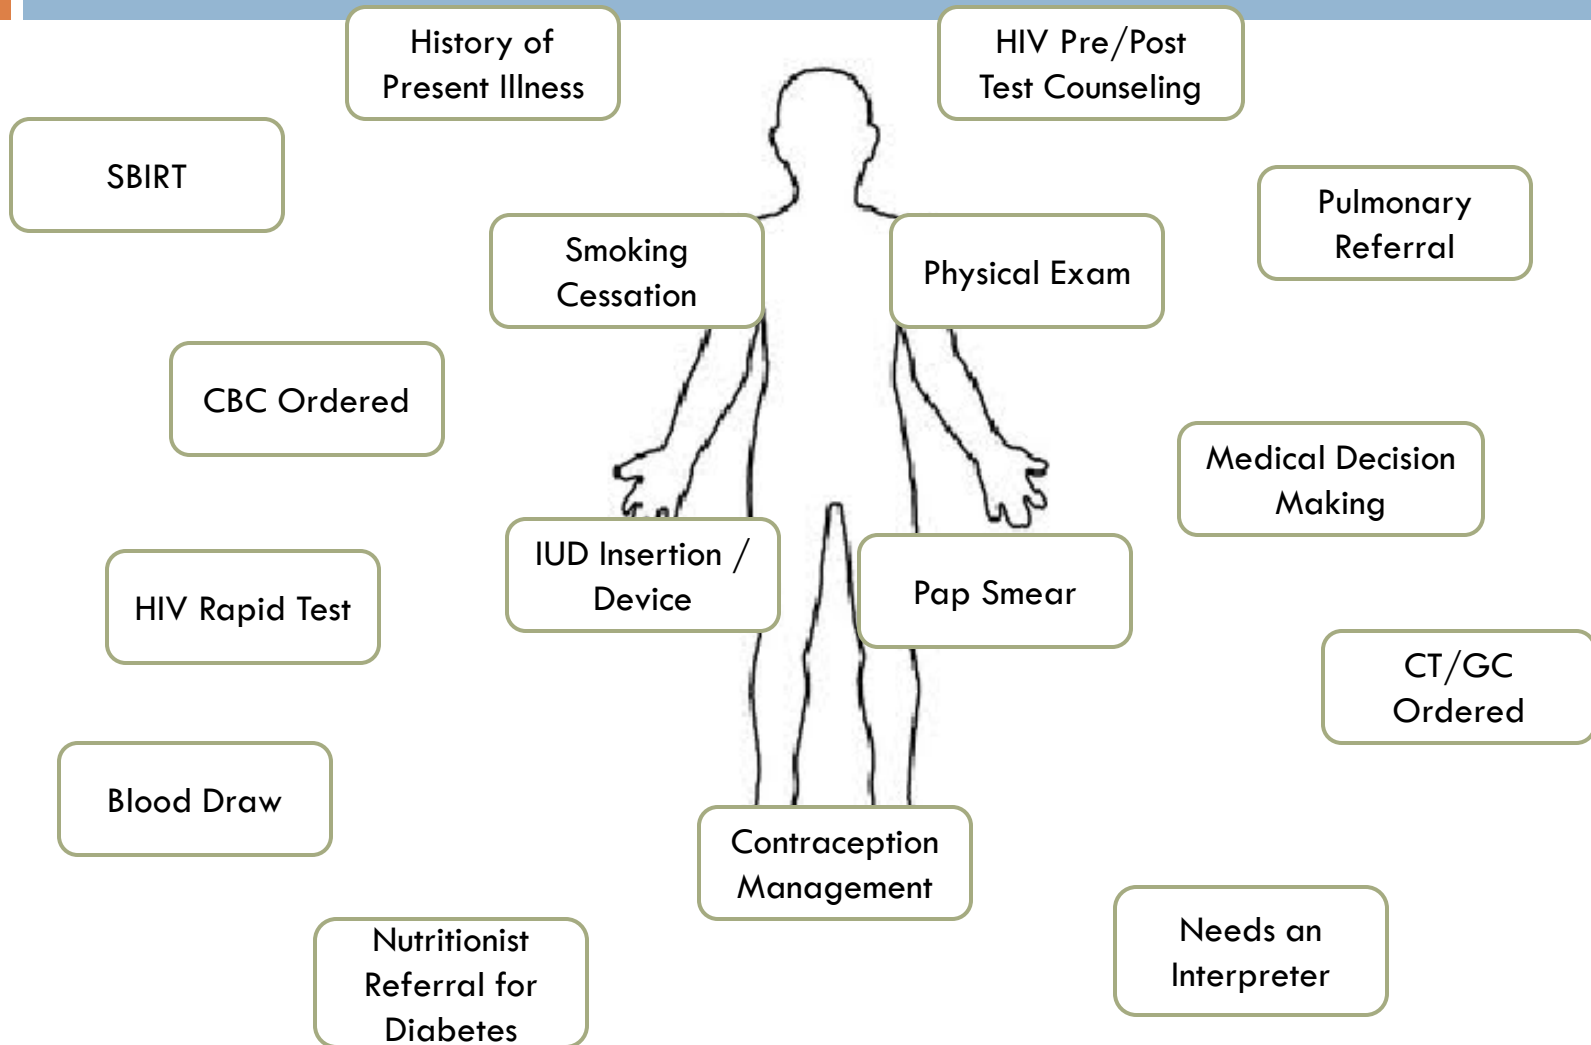

# Sound familiar?

- Patient comes in for annual visit
  - ▣ Complains of a discharge – *oh by the way...*
  - ▣ Has 3 genital warts removed
  - ▣ Pap smear provided
  - ▣ Has an IUD device inserted
  - ▣ Is given STD and HIV counseling
  - ▣ Condoms provided
  - ▣ Has 5 labs tests performed
  - ▣ Appointment is at 7 pm
  
- Clinician documents E/M only

# Clinical Visit - Components

5

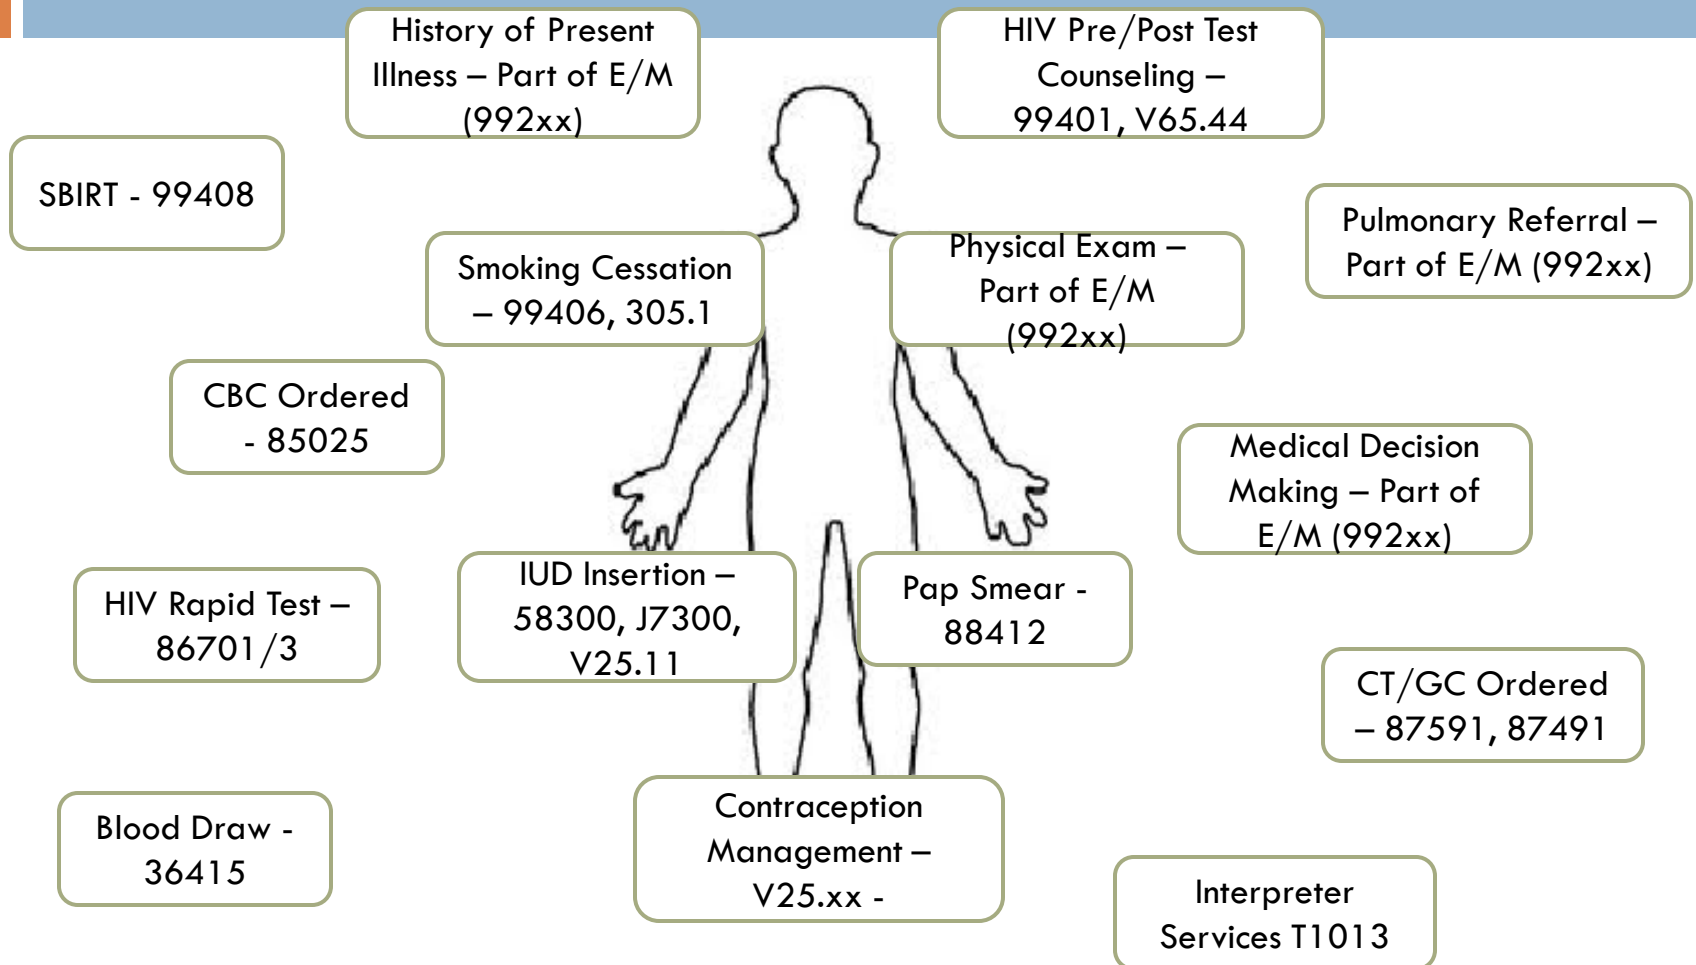

# What about the Add-ons?

- Maximize reimbursement by capturing additional paying services such as:
  - ▣ Weekends and Nights
  - ▣ Ancillary Tests
  - ▣ Smoking Cessation
  - ▣ HIV Testing and Counseling
  - ▣ Devices
  - ▣ Screening, Brief Intervention, and Referral to Treatment (SBIRT)
  - ▣ Interpreter Services

# Charge Capture

7

# Always....

- ❑ “If you didn’t write it down, you didn’t do it
- ❑ Follow coding guidelines and only code what is contained in the medical record – reimbursement will follow

# Best Practices: Charge Capture

- ❑ Partnership between clinical and billing staff a must
- ❑ Good tools
- ❑ Time to do the job well
- ❑ Clean claim submission the first time

# Always, Sometimes, Never...

- Aggressive vs. Timid - are you the outlier?

**Provider  
Protocol**

**vs.**

**Medical  
Necessity**

# Key Terms – Coding the Visit

# Diagnosis Codes

- ICD-9-CM (International Classification of Diseases, 9th edition, Clinical Modifications)
  - ▣ Represents illnesses and conditions
  - ▣ Supports medical necessity of services/ procedures provided
  - ▣ Supported by the documentation in the patient's medical record
  - ▣ Only the provider (physician, registered physician assistant, registered nurse practitioner, or licensed midwife) determines the diagnosis

WHO IS AUDITING TO ENSURE CORRECT CODES ARE CAPTURED?

# Primary Diagnosis (PDX)

- Code assigned to the diagnosis, condition, problem, or other reason shown in the documentation to be *chiefly responsible for services provided*
  - ▣ Code to the highest level
  - ▣ Signs and symptoms may be reported if a diagnosis has not been determined
  - ▣ Do not code for ruled-out diagnoses
  - ▣ Two + Dx may be co-equal and meet the criteria for PDX
  - ▣ Don't give a patient a condition they do not have

# Secondary Diagnoses (SDX)

- Co-existing conditions may occur at the same time
- "V" codes identify encounters for reasons other than illness or injury (e.g. annual exams, contraceptive management)
- Code all documented conditions that coexist at the time of the encounter/visit and require or affect patient care, treatment or management
- Review official ICD-9-CM guidelines in your current manual in Sections I and IV

*For example: V72.31 & V25.02 would be reported for a client receiving both an annual exam and contraceptive management*

# Common Diagnosis Errors

- ❑ Diagnosis does not match documentation
- ❑ Physicians tend to code rule-out, possible, probable as definitive diagnoses
- ❑ Lack of specificity in documentation and coding
- ❑ Billing staff adds missing codes they know should be on the claim

# Coding Challenges...

- ❑ Clinicians are not comfortable with E/M coding
- ❑ Diagnoses are often missed or incorrectly documented
- ❑ Co-equal diagnoses are not clearly indicated
- ❑ Procedures and lab tests are not captured or billed
- ❑ New revenue opportunities are missed because service is not documented
- ❑ Billing staff is not aware of payer changes

WHAT ARE YOUR CHALLENGES?

# Procedure Codes

- HCPCS - Healthcare Common Procedure Coding System is a set of health care procedure codes
  - ▣ Level I HCPCS codes are called CPT®-4 codes (Current Procedural Terminology)
    - Every procedure and service has a distinct CPT code
  - ▣ Level II HCPCS codes identify products, supplies, materials and service which are not included in the CPT-4 codes
  - ▣ The terms CPT, HCPCS, and "Procedure Codes" often are used inter-changeably

*For example: 58300 is the CPT code for Insertion of the IUD and J7300/J7302 are HCPCS used to identify the IUD device*

# E/M Group Codes

## □ Preventative Visits

- ▣ 99381-99387 New Patient; 99391-99397 Established
- ▣ Age Specific
- ▣ Meant for the reporting of asymptomatic patients
- ▣ Includes counseling, anticipatory guidance, and risk factor reduction interventions, as well as the ordering of laboratory and diagnostic procedures
- ▣ Used for routine annual exams

*For example: An annual GYN exam for a 20 year-old woman would be reported as 99395*

# E/M Group Codes

## □ Problem Focused

- ▣ Services to evaluate patients with a medical problem or chief complaint are codes 99201 – 99215
- ▣ **New Patient:** 99201 – 99205
- ▣ **Established Patient:** 99211 – 99215

*For example: A client visit with a NP to start Depo-Provera with an exam and counseling is reported as 99213*

# Chief Complaint (CC)

- Concise statement describing the symptom, problem, condition, diagnosis, or other factor that is the reason for the patient encounter, usually stated in the patient's own words
  - ▣ Should be clearly reflected in the medical record
  - ▣ Front desk should not be filling this in prior to visit

CHALLENGE – WHO IS CAPTURING THE CC?

# Components of E/M

- Three key components:

- ▣ History

- Includes chief complaint, history of present illness, past personal, social and family history and review of systems

- ▣ Physical Exam

- ▣ Medical Decision Making

- ▣ For a new patient (not seen in 3 years) – you need all 3 components

- ▣ For an established patient, you need 2 of the 3 components

# Components of E/M

- Other contributory factors – not required
  - ▣ Counseling
  - ▣ Coordination of care
  - ▣ Nature of presenting problems
  - ▣ Time
    - May only be used when 50% or more of the time is spent face-to-face with the patient and/or family providing counseling and/or coordination of care

# E/M Based on Time

- **Total length of time of the encounter** (physician face-to-face) should be documented and the record should describe the counseling and/or activities to coordinate care
- Level of service is determined by comparing total time spent with the patient to typical CPT times for E/M services

# E/M Based on Time con't

- When coding based on time, typical E/M components (History, Exam and Medical Decision Making) **do not** have to be documented
  - ▣ However, the medical record must show the issues discussion, patient questions, physician response, and recommendations or next steps

# “Oh By the Way...”

25

- When a client presents for a preventive visit and is found to also have a problem-focused, two E/M codes may be reported if:
  - ▣ Documentation clearly supports separate and distinct services
  - ▣ Modifier -25 is appended to the problem-oriented E/M visit
  - ▣ Provider selects the primary diagnosis for the service chiefly responsible for the services provided
    - **Coding tip:** Write a separate paragraph identifying your additional history and/or examination of the problem

CHALLENGE – WHY IS IT IMPORTANT TO CAPTURE THESE VISITS?

# Documentation Checklist

- ✓ Is it complete and accurate?
- ✓ Are orders dated and signed?
- ✓ Are required times captured?
- ✓ Are charts reviewed on a regular basis?
- ✓ Are clinicians available to clarify / answer questions pertaining to the billing of visit?
- ✓ Ensure easy access to valid codes which reflect actual services provided
  - Encounter forms
  - EMR
  - Review explosion codes built into your billing system for accuracy

# Billing Challenges

27

- ❑ Encounter forms / templates do not accurately reflect services
- ❑ Billing systems are limited in number of CPT and diagnoses that can be sent on claim
- ❑ Modifiers are often missed
- ❑ Explosion codes misrepresent services performed
- ❑ Can't easily adjust claims within system
- ❑ Staff does not understand why claim did not pay

WHAT ARE YOUR CHALLENGES?

# Staff Training & Performance Improvement Activities

- Understanding of Specialty
  - ▣ Usual and Customary Visits
  - ▣ Procedures
  
- Documentation

# Staff Training & Performance Improvement Activities

- Classroom
- Case Scenarios
- Chart Reviews
  - ▣ External Review
  - ▣ Self Assessment
- Job Aids

**WHAT STEPS CAN YOU TAKE HOME FROM TODAY?**
