

Title X in New Hampshire Improving Public Health and Saving Taxpayer Dollars

**Between FY2010 - FY2013, funding for Title X was cut by \$39.2 million—
12.3% in three fiscal years.**

Title X Served 20,615 New Hampshire Residents in 2013

The New Hampshire Department of Health and Human Services Family Planning Program is the sole Title X grantee in New Hampshire, supporting 25 Title X-funded health centers across the state.ⁱ The Title X network served 19,195 women & 1,420 men, for a total of 20,615 residents of New Hampshire in 2013.ⁱⁱ

Title X provides high-quality family planning services and other preventive health care to low-income and uninsured individuals who may otherwise lack access to health care.

- Of the 20,615 patients served, 52% had incomes at or below 100% of the federal poverty level (FPL), ***meaning they earned \$11,490 a year or less.***ⁱⁱⁱ
- ***Eighty-two percent*** of Title X patients in New Hampshire ***earned less than \$28,725*** a year (250% of the FPL).^{iv}

Title X Saves New Hampshire Residents' Taxpayer Dollars

Title X supports critical infrastructure needs that are not reimbursable under Medicaid or commercial insurance, such as staff salaries, individual patient education, community-level outreach, and public education about family planning, women's health, and sexual health issues. Without Title X, access to high-quality family planning services for low-income New Hampshire residents would not be possible.

- The average cost of a Medicaid-funded birth is \$12,613.^v In 2008, births resulting from unintended pregnancies cost New Hampshire's taxpayers \$35 million.^{vi}
- The Title X program helps alleviate these costs by preventing unintended pregnancy through contraception, counseling, and other services.^{vii}

Title X is Essential to Improving Public Health and Saving Taxpayer Dollars in New Hampshire

Cutting funding for family planning services will lead to more unintended pregnancies and higher health care costs in New Hampshire. Family planning helps women and families plan the timing and spacing of their pregnancies, which results in better educational attainment and economic security; these, in turn, are linked to better health outcomes for women and families.

- Family planning services at New Hampshire's Title X-funded health centers helped prevent 5,400 unintended pregnancies in 2012, which would likely have resulted in 2,700 unintended births and 1,800 abortions.^{viii}
- Without publicly funded family planning, the number of unintended pregnancies in New Hampshire would be 63% higher.^{ix}
- Title X-funded services produce significant cost savings to the federal and state governments; services provided at Title X-supported sites in New Hampshire accounted for \$9.1 million in such savings in 2010 alone.^x

New Hampshire's Title X-funded health centers provide a wide range of services:

- Pregnancy testing
- Contraceptive services
- Pelvic exams
- Screening for cervical and breast cancer
- Screening for high blood pressure, anemia, and diabetes
- Screening for STDs and HIV/AIDS
- Infertility services
- Health education
- Referrals for other health and social services

Additional cuts to Title X funding—especially in the current economy—would harm tens of thousands of low-income and poor families throughout New Hampshire, in turn costing, not saving, the federal government money.
