

## Changes in Family Planning Coding: Updates to ICD-10-CM Take Effect October 1, 2016

Family planning providers will soon have access to new diagnosis codes, including those that better reflect the full range of contraceptive methods currently available on the market. The Centers for Medicare & Medicaid Services (CMS) and the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS) reviewed the International Classification of Diseases, 10<sup>th</sup> Edition (ICD-10) for use in the US and published changes that will take effect on October 1, 2016. This set of updates are collectively known as the 2017 Addenda and are to be used for patient encounters occurring from October 1, 2016 through September 30, 2017.

The 2017 Addenda includes two types of updates: 1) new codes added to ICD-10-CM and 2) edits to descriptive language of current ICD-10-CM codes that will clarify use of codes. Both updates are important for providers to understand. A new code may better represent health care services that are currently provided and should therefore be incorporated into use. A new description for a code currently in use may provide better insight into the appropriate use of codes, or may correct an error in a description that created confusion.

The following pages include a list of changes to ICD-10-CM that are pertinent to family planning providers. The document is divided into three sections: 1) new ICD-10-CM codes that may be needed frequently in family planning settings; 2) new ICD-10-CM codes related to reproductive health but used infrequently in family planning settings; and 3) edits to ICD-10-CM tabular list descriptions among codes of interest to family planning providers. This list is not intended to represent all of the changes ICD-10-CM will undergo on October 1, 2016. Providers should review the [2017 Addenda](#) in its entirety and consult payers to confirm their implementation of ICD-10-CM updates.

*Disclaimer: This reference is for education purposes only. Nothing herein is a specific recommendation about selecting ICD codes. Code selection and claim submission is based upon medical record documentation for services rendered and diagnoses considered for each individual encounter. Providers must check with the coding and coverage guidelines for a particular payer.*
