## NATIONAL SNAPSHOT OF THE TITLE X NETWORK

The diverse network of Title X-funded health centers provides a range of essential preventive services, from cancer screenings to HIV testing to contraceptive care, for millions of low-income people every year.

Despite this important mission, federal funding for Title X has shrunk in recent years, and now fewer people are able to access family planning and sexual health services funded by Title X. In 2014, only $39 \%$ of women who needed publicly funded contraceptive services were able to access them.
